

Why Lean is Winning

Dr.-Ing. Sebastian Ullrich
Head of Engineering, Lean FRO

Google Munich, February 25, 2026

Lean is an open-source programming language and proof assistant

Lean and its tooling are implemented in Lean. Lean is very **extensible**.

LSP, Parser, Macro System, Elaborator, Type Checker, Tactic Framework, Proof automation, Compiler, Build System, Documentation Authoring Tool.

Lean has a **small trusted kernel**, proofs can be exported and independently checked.

"Lean is not just interesting as a theorem prover. It is an example of a *well-designed, modern programming language* that can serve as a model for current and future languages."

— Harry Goldstein (University of Buffalo)

Recognition in 2025

JUNE 2025

ACM SIGPLAN Programming Languages Software Award

Recognizing Lean's impact on programming languages research and practice

*"Lean has had and continues to have a **broad impact** on industrial practice and scientific research. [...] Lean has become the **de facto choice for AI-based systems** of mathematical reasoning."*

JULY 2025

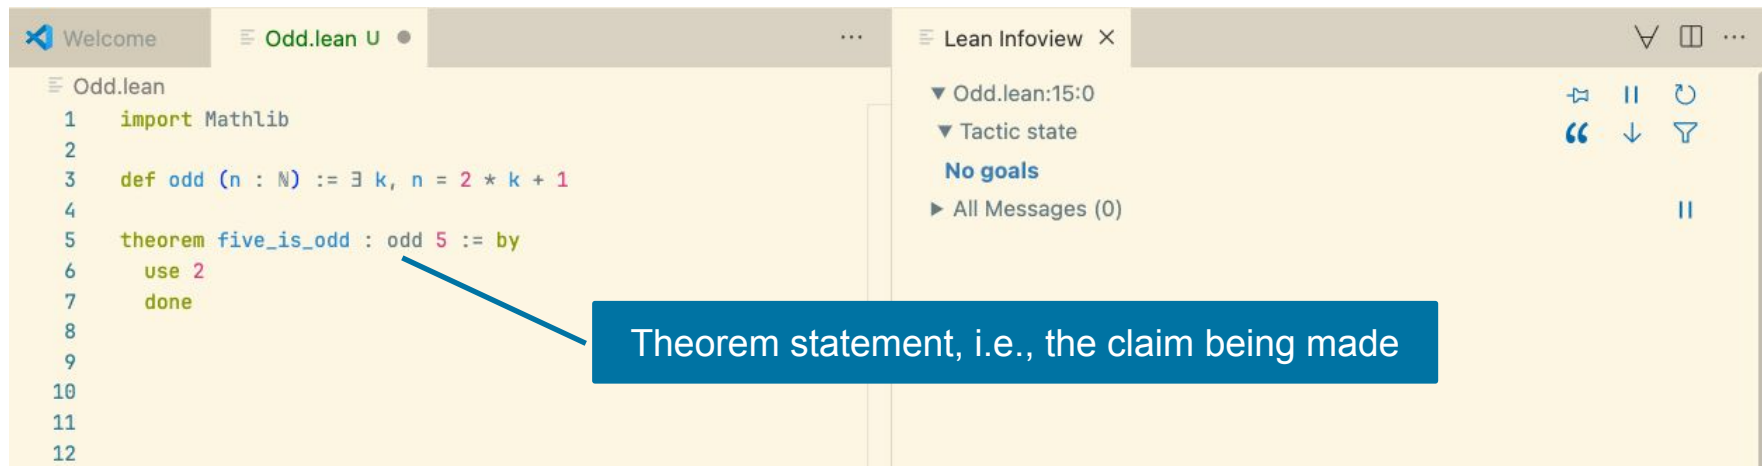

Skolem Award (Test of Time)

For the 2015 CADE paper

"The Lean Theorem Prover (System Description)"

*"Lean [...] has a **tremendous impact** in interactive and automated reasoning, with numerous applications, in particular to **formalized mathematics** and **software verification**."*

Our first theorem

The screenshot shows the Lean IDE interface. The main editor displays the following code in `Odd.lean`:

```
1 import Mathlib
2
3 def odd (n : ℕ) := ∃ k, n = 2 * k + 1
4
5 theorem five_is_odd : odd 5 := by
6   use 2
7   done
```

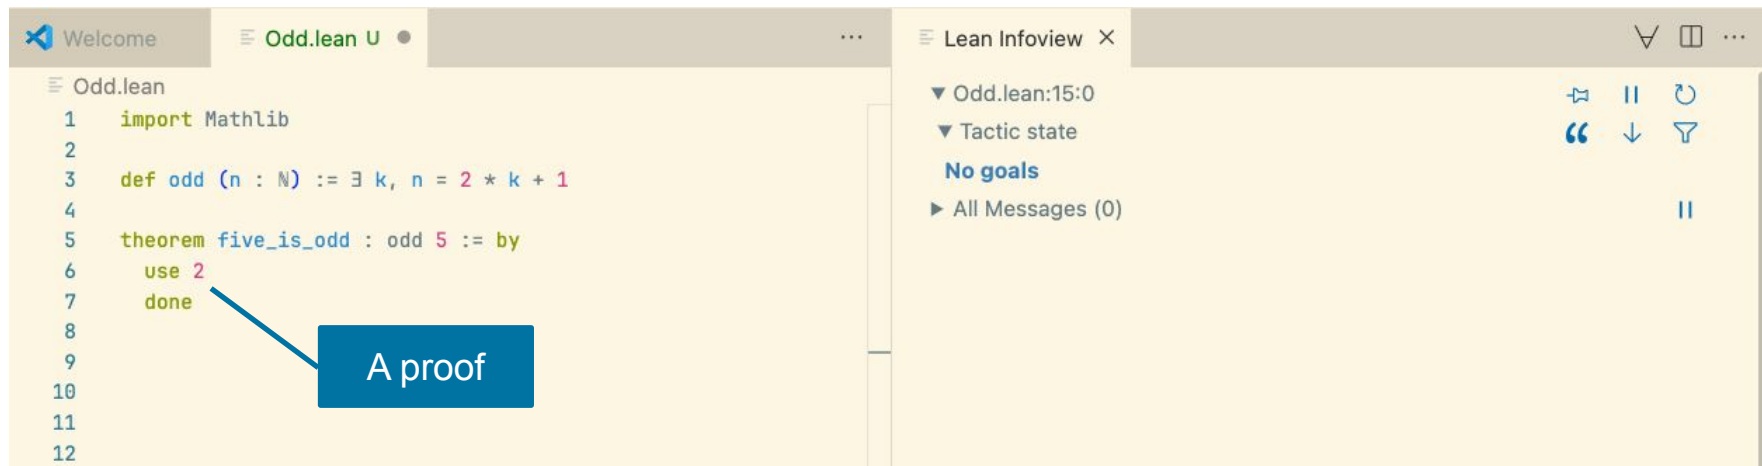

The `theorem five_is_odd` line is highlighted with a blue box, and a blue arrow points from the box to the text: "Theorem statement, i.e., the claim being made".

The right-hand pane shows the "Lean Infoview" for the theorem, displaying:

- Odd.lean:15:0
- Tactic state
- No goals
- All Messages (0)

Navigation icons for the infoview are visible on the right side of the pane.

Our first theorem

The screenshot shows the Lean IDE interface. The main editor displays the following code in `Odd.lean`:

```
1 import Mathlib
2
3 def odd (n : ℕ) := ∃ k, n = 2 * k + 1
4
5 theorem five_is_odd : odd 5 := by
6   use 2
7   done
8
9
10
11
12
```

A blue box labeled "A proof" points to the `done` keyword on line 7. The right-hand pane, titled "Lean Infoview", shows the status of the current goal:

- Odd.lean:15:0
- Tactic state
- No goals
- All Messages (0)

Control icons for the Infoview include a pin, a pause, a refresh, a quote, a downward arrow, a filter, and a double vertical bar.

Our first theorem

The screenshot shows the Lean IDE interface. The main editor displays the following code:

```
Odd.lean > five_is_odd
1  import Mathlib
2
3  def odd (n : ℕ) := ∃ k, n = 2 * k + 1
4
5  theorem five_is_odd : odd 5 := by
6    use 3
7    done
8
9
10
11
12
```

A blue callout box with the text "An incorrect proof" points to the `done` tactic on line 7.

The right-hand pane, titled "Lean Infoview", shows the current state of the proof:

- Odd.lean:7:2
- Tactic state
- 1 goal
- case h
- $\vdash 5 = 2 * 3 + 1$
- Messages (1)
- All Messages (1)

Theorem proving in Lean is an interactive game

```
Odd.lean > square_of_odd_is_odd
1  import Mathlib
2
3  def odd (n : ℕ) := ∃ k, n = 2 * k + 1
4
5  -- Prove that the square of an odd number is always odd
6  theorem square_of_odd_is_odd : odd n → odd (n * n) := by
7  done
8
9
10
11
12
```

Lean Infoview

- Odd.lean:7:2
- Tactic state
- 1 goal
 - $n : \mathbb{N}$
 - $\vdash \text{odd } n \rightarrow \text{odd } (n * n)$
- Messages (1)
- All Messages (2)

The “game board”

“You have written my favorite computer game” – Kevin Buzzard (Imperial College London)

Mathematics

Mathlib github.com/leanprover-community/mathlib4

The Lean Mathematical Library supports a wide range of projects

It is an open-source **collaborative project** with over 750 contributors and 2.2M LoC

“I’m investing time now so that somebody in the future can have that amazing experience” –

Heather Macbeth (Fordham University)

KEVIN HARTNETT SCIENCE OCT 11, 2020 8:00 AM

The Effort to Build the Mathematical Library of the Future

A community of mathematicians is using software called Lean to build a new digital repository. They hope it represents where their field is headed next.

The Challenge

In November of 2020, Fields medallist Peter Scholze posits the Liquid Tensor Experiment challenge

*“I spent much of 2019 **obsessed with the proof of this theorem**, almost getting crazy over it. In the end, we were able to get an argument pinned down on paper, but I think nobody else has dared to look at the details of this, and so **I still have some small lingering doubts**”*

Success

The full challenge was completed in Lean in July 2022 by a team under Johan Commelin.

The team not only verified the proof but also simplified it.

Moreover, they did this without fully understanding the entire proof.

*“The Lean Proof Assistant was really that: **an assistant in navigating through the thick jungle that this proof is.** Really, one key problem I had when I was trying to find this proof was that I was essentially unable to keep all the objects in my RAM, and I think the same problem occurs when trying to read the proof” – Peter Scholze*

Only the Beginning

Independence of the Continuum Hypothesis, Han and van Doorn, 2021

Sphere Eversion, Massot, Nash, and van Doorn, 2020-2022

Unit Fractions, Bloom and Mehta, 2022

Consistency of Quine's New Foundations, Wilshaw and Dillies, 2022-2024

Polynomial Freiman-Ruzsa Conjecture, Tao and Dillies, 2023

Prime Number Theorem And Beyond, Kontorovich and Tao, 2024-ongoing

Carleson Project, van Doorn, 2024-2025

Equational Theories Project, Tao, Monticone, and Srinivas, 2024-2025

Fermat's Last Theorem, Buzzard, 2024-ongoing

Sphere Packing, Birkbeck et al., 2025-ongoing

Software

Lean in Software Verification

Lean is a programming language, and is used in **many software verification projects**

You can write code and reason about it simultaneously

You can prove that your code has the properties you expect

“Testing can show the presence of bugs, but not their absence” – E. Dijkstra

Lean is not only for verified programming: it comes with a rich standard library with async I/O and networking, date time types, concurrency primitives, verified collection types, iterators, ...

SampCert

A project led by Jean-Baptiste Tristan at AWS

An **open-source** Lean library of formally **verified differential privacy primitives**

Their implementation is not only verified, but it is also **twice as fast as the previous one**

They managed to implement **aggressive optimizations** because Lean served as a guide, ensuring that **no bugs** were introduced

Many more open-source projects

Arklib (Ethereum Foundation), a SNARK verification framework

AMO-Lean (Lambda), a verified optimizing compiler for cryptographic primitives

FLoPS (Rutgers), a formalization of the upcoming IEEE P3109 floating-point standard

 **CSLib** : A Focused Effort on Formalizing Computer Science in Lean

The CSLib logo consists of a central orange square with eight black lines radiating outwards to smaller black squares, resembling a network or a starburst pattern.

Supported by: AWS, Google DeepMind, SDU, Centaur (Stanford)

Software Verification Ecosystem

Velvet (NUS), an imperative program verifier embedded in Lean

Aeneas (Inria/MSR/Google), a Rust verifier via translation to Lean

Strata (AWS), a unified platform for formalizing language syntax and semantics

mvcgen (Lean FRO), a verification framework for monadic Lean programs

AI

Lean Enables **Verified** AI for Mathematics and Code

LLMs are powerful tools, but they are prone to **hallucinations**

In math, a **small mistake can invalidate the whole proof**

Machine-checkable proofs are the antidote to hallucinations

Move Over, Mathematicians, Here Comes AlphaProof

A.I. is getting good at math — and might soon make a worthy collaborator for humans.

*"At Google DeepMind, we used Lean to build AlphaProof, a new reinforcement-learning based system for formal math reasoning. **Lean's extensibility and verification capabilities were key in enabling the development of AlphaProof.**" — Pushmeet Kohli, Vice President of Research, Google DeepMind*

AlphaProof & the International Math Olympiad

Determine all real numbers α such that, for every positive integer n , the integer

$$\lfloor \alpha \rfloor + \lfloor 2\alpha \rfloor + \dots + \lfloor n\alpha \rfloor$$

is a multiple of n . (Note that $\lfloor z \rfloor$ denotes the greatest integer less than or equal to z . For example, $\lfloor -\pi \rfloor = -4$ and $\lfloor 2 \rfloor = \lfloor 2.9 \rfloor = 2$.)

Solution: α is an even integer.

`open scoped BigOperators`

`theorem imo_2024_p1 :`

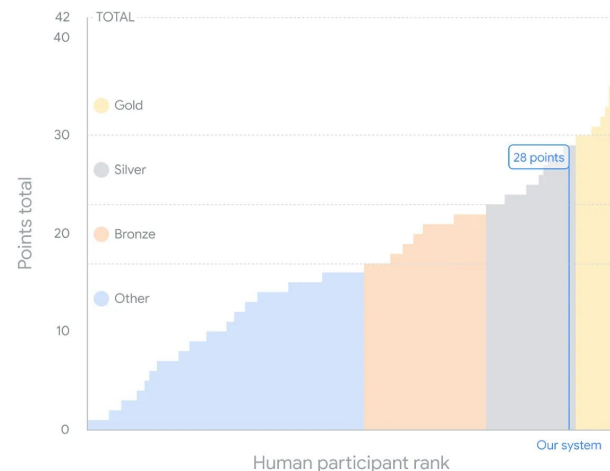

```
{(α : ℝ) | ∀ (n : ℕ), 0 < n → (n : ℤ) | (∑ i in Finset.Icc 1 n, ⌊ i * α ⌋)}
```

```
= {α : ℝ | ∃ k : ℤ, Even k ∧ α = k} := by
```

```
rw [(Set.Subset.antisymm_iff), (Set.subset_def)], ]
```

```
/- We introduce a variable that will be used  
in the second part of the proof (the hard direction)
```

Score on IMO 2024 problems

Math, Inc.

Logical Intelligence

...and more to come

A thriving startup ecosystem validates Lean as the platform of choice for verified AI reasoning

Wrap-Up

Lean FRO: Shaping the Future of Lean Development

The Lean Focused Research Organization (FRO) is a non-profit dedicated to Lean's development.

Its mission is to enhance critical areas: **scalability**, **proof automation**, **usability**, and **documentation**.

Founded in **August 2023**, the organization has 21 members.

We are very grateful for all philanthropic support we have received.

It must reach **self-sustainability in August 2028** and become the **Lean Foundation**.

29 releases and **7,500+ merged pull requests** in the main repository only since its launch in July 2023.

Lean being neither an industry nor academic product, we run the FRO as a startup.

The Lean FRO team

The Lean FRO team ... in Europe

The Lean FRO team ... in Germany

The Lean FRO team ... in Munich

Conclusion

Lean is an **efficient programming language** and **proof assistant** – **no compromise**

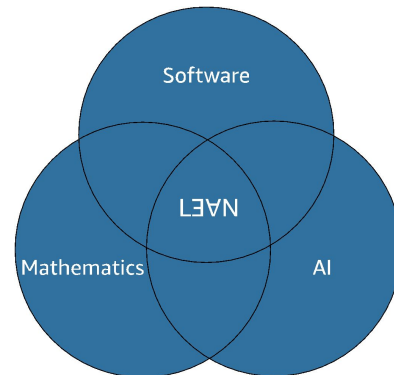

Lean is very **extensible** and is implemented in Lean: the ultimate extensibility test.

Proofs are machine-checkable, maintainable, and auditable.

The Lean FRO is shipping: module system, new compiler, grind, more to come.

Mathlib is changing how math is done.

Our goal: make verified software the norm, not the exception.

Thank You...

to Vangelis Parasidis and Google Munich for hosting us

to Christian Pfrang for the conception and organization

to you for joining us today!
